

**1** Wash and dry your hands.

**2** Pee into the sample tube until it is almost full.

**3** Screw the lid on tightly and put the tube in its protective case.

**4** Place all your samples and **lab card** into the grey freepost envelope and post in any Royal Mail post box.

### What is included in the kit:

This is a simple and reliable test designed to be safely used at home.

Protective case

Sample tube

### When should I take this test?

You should wait 2 weeks after you think you could have been exposed to an infection. This is because Chlamydia and Gonorrhoea can take up to 2 weeks to be detected in a test. If unsure, test now and repeat later. You can do this test at any time of day.

### Do I need to write my name on the samples?

No, we have already labelled your samples with a unique code - this is to ensure your experience is as easy and discreet as possible.

### What happens next?

We will text you when your samples arrive at the lab.

We will then text you your test results as soon as possible (always within 7 days).

If you do have an infection we will advise you how to get treatment and further support.
